Questions 360 Notes Analyser answers

- Who has unauthorised access to Databases and Mail Files?
- Which databases and mail files are unused by the business?
- Who is the principal owner of the database?
- Which servers have replicas of a database?
- How often are critical databases being used by the business?
- Which databases need to be archived to optimise them?
- Who are the heavy email users?

Control your Lotus Notes environment

Manage Your Lotus Notes & Domino Environment

With 360 Notes Analyser you get a complete picture of the mail files & databases on your servers and will enable you to take back control of your investment in Lotus Notes & Domino. See at a glance databases that are using resources unnecessarily on several of your servers and automatically start the process of decommissioning unused databases and mail files.

Security Audit

360 Notes Analyser lets you know which users and groups have access to individuals mail files and Lotus Notes applications in your business enabling a continuous audit of the security access.

Database & Mail File Usage

360 Notes Analyser gathers information on the Databases, Servers, Path, Size, Documents, Access, Usage, ACL's etc. and pulls it all together to give you a central picture of your Lotus Notes & Domino Infrastructure.

Regain Control

Are your backups taking too long, creaking due to the amount of unused information you are continually safe guarding? Are your servers under performing as there are Superfluous databases and mail files clogging them up?

The system provides an easy to use environment that is server based, allowing administrators to centrally access information and manage the environment. The system enables administrators to block access to databases before archiving them permanently to allow single click recovery if needed by the business.

Reporting

With 360 Notes Analyser you get a complete picture of the Lotus Notes environment which is continually updating itself and enables you to see trends on how the environment changes such as rolling out a new database application.

You can view database usage by day, week, and month and view how the number of documents change and size of mail files and databases. See an ACL Breakdown to audit who has access to mail files and databases.

Capture who the principal user of a databases so that you know who to contact when you need to complete maintenance work.

Technical

360 Notes Analyser is a Lotus Notes solution, Optimised to run on Lotus ND6.5 and above.
